

BROWSER

DATABASE SEARCH MODULE

The Browser allows a search (based on several predefined criteria) for one or more elements in all databases.

The use of more than one criteria will result in a restricted list of found elements.

The browser can also prepare live events which are not physical elements of the database e.g. an external tape, CDs, live discussion.

Browser can search in any type of SQL databases (ACCESS, MS SQL, MYSQL, Sybase, CENTURA,...), connection is done over ODBC standard drivers.

Search fields will be defined for each user

Showed fields is depending on the category of the database

One click on the top of the column set the order of the found items

When Audio is founded on server, a double click on item will play it.

Control of search can be done over GPI or external Keypad

When audio want to be used, just Drag& Drop it in the application or on desktop.

Browser will drop directly in all Zenon-Media software but also on third part software (Dig'as, Netia, cool edit, soundforge, wavelab, audacity, ...)
