

GRIDMANAGER

Clock manager and external file merger

Gridmanager is the interface that you need to build your clock for all the days.

Clocks can be stored, for further needs.

In a normal week schedule some special days can be inserted for holiday or different free days.

The merge of the music scheduler and traffic management will be done over this interface.

Merging external file is done over a lot a dedicated filter for the most common third part software like:

selector, powergold, music one, repertoire, music master, ukimedia, Medas, Meridian, AluP,...

Up to 3 different software can be linked with Gridmanager to import external schedule for Music, traffic, promo.

Import filter for each department can be different to use dedicated software for each work.

Some recurrent jingle will be directly placed on their location

Interaction between on air schedule and cart machine to preload the cartwall on specific position in scheduler is also possible.
