iQ6

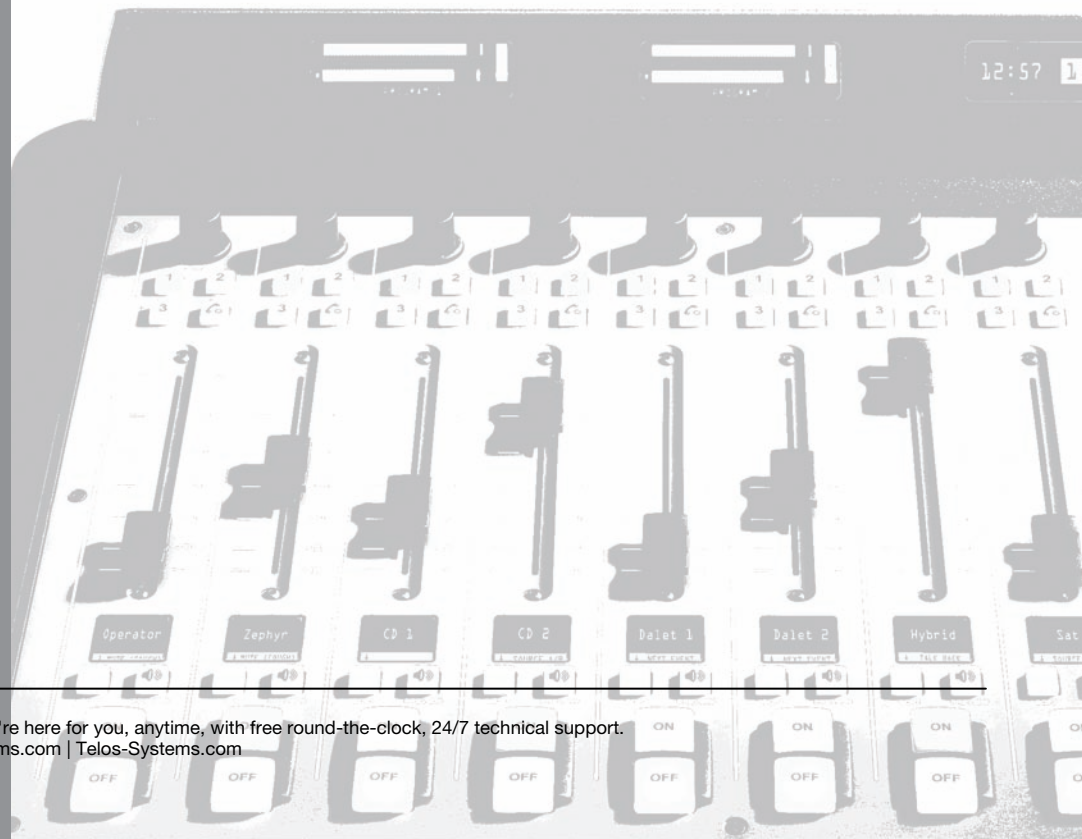

iQ6: MULTI-LINE PHONES MADE SMARTER

Six lines, one tiny connection. iQ6 is the Telco gateway for Axia's new iQ console. iQ6 saves you money and time, because it plugs right into your Livewire network, eliminating the cost of discrete I/O, cabling and soldered connectors, and drastically reducing installation time.

iQ6 carries six lines worth of audio, hybrid control and backfeed on one skinny CAT-5 cable. You control it directly from Axia iQ consoles equipped with the Telco expansion frame, or by using the new Telos VX Director or VX Producer software to take and screen calls directly via your producer's PC.

iQ6 works with POTS or ISDN phone lines, and comes equipped with two 3rd-generation Telos hybrids with Digital Dynamic EQ; the same advanced hybrids found in our Nx phone systems. iQ6 also comes with new AEC - Advanced Echo Cancellation - from Fraunhofer Labs, revolutionary technology that eliminates open-mic feedback.

Radio Never Sleeps. Neither do we. We're here for you, anytime, with free round-the-clock, 24/7 technical support.
