ZENON-MEDIA
ALL IN ONE AUDIO RADIO SOLUTIONS

CART

CART MACHINE

Cart is a virtual Cart machine, to which it is possible to drop sound files coming from a database (Browser) or from Windows Explorer™.
The playback of inserted carts starts when pressing dedicated buttons from the mixing desk or from a special keyboard.

Up to 16 cart slots can be defined on each Cart machine.
In addition to the cart slots, cart lists can also be used. The number of lists is also restricted to 16.

For each slot, a rotation can be created. After the broadcasting of one audio element, the next one in the rotation appears automatically. Commercial blocks can be set and started by pressing a button or starting automatically at predefined.

When needed more than one audio file can be playout with automatic mix on the same audio channel

Regional Playout
If an audio signal is present at the input of the audio card, (the master radio program for example), the cart machine can generate cross fades between the main program and the card or between the commercial block and the card.

Cart works under Windows 2000™ or Windows XP™; it uses normal Soundblaster compatible sound cards.

Cart is able to play simultaneously several audio format included any bitrate and frequency.
